CLAIMS

1	1. A method for managing inventory of a stock item
2	over a number of convenient time periods, comprising:
3	receiving an updated demand forecast and updating
4	projected forecast data;
5	determining for a given time period:
6	projected inventory level using said projected
7	forecast data, supplier commitment data, and prior periods'
8	projected inventory levels; and
9;	days of supply of inventory using said projected
10	inventory level for a current time period and forecast data
11	for subsequent periods; and
12	if said days of supply is out of a predetermined range
13,	for a given time period, taking corrective action.
1	2. The method of claim 1, wherein said given time
2	period is established by at least one of:
3	a supplier; and
4	a manufacturer.
1	3. The method of claim 1, wherein said determining for
2	a mina

- 3. The method of claim 1, wherein said determining for a given time period said projected inventory level includes providing a search criteria including a part number identifying said stock item.
- 4. The method of claim 3, wherein said search criteria includes a part name identifying said stock item.

- 5. The method of claim 3, wherein said search criteria includes a part description identifying said stock item.
- 1 6. The method of claim 1, wherein said number of convenient time periods includes a selected horizon.
- 7. The method of claim 1, wherein said number of convenient time periods is measured in increments of time, said increments including one of:

days;

weeks; and

months.

- 8. The method of claim 1, wherein said projected forecast data includes a quantity of said stock item expected to be consumed during at least one of said number of convenient time periods.
- 9. The method of claim 1, wherein said supplier commitment data includes a quantity of said stock item a supplier commits to provide for a manufacturer.

1
            10. The method of claim 1, wherein said determining
 2
       for a given time period said projected inventory level
       includes performing a calculation comprising:
 3
 4
            PI(n) = PI(n-1) - F(n-1) + C(n-1);
            wherein further:
 6
            PI represents a projected inventory value;
            n represents a variable, said variable representing a
 7
       time period;
 8
            F represents a projected forecast value; and
 9
10
            C represents a supplier commitment value.
            11. The method of claim 1, wherein said predetermined
       range for said projected days of supply is established by
       at least one of:
            a manufacturer; and
 5
            a supplier.
                 The method of claim 1, wherein said predetermined
1
            12.
 2
       range for said projected days of supply is a single number.
                 The method of claim 1, wherein said days of
1
            13.
       supply is measured in time increments including one of:
 3
 4
            days;
            weeks; and
 5
 6
            months.
1
                 The method of claim 1, wherein said corrective
2
       action includes modifying said supplier commitment data.

1		15.	The	method	of	claim	14,	wherei	in said	mod	difying
2	said	suppl	ier	commitm	nent	data	incl	ludes d	delaying	, a	shipment.

- 16. The method of claim 14, wherein said modifying said supplier commitment data includes increasing said supplier commitment data.
 - 17. A storage medium encoded with machine-readable computer program code for managing inventory of a stock item over a number of convenient time periods, the storage medium including instructions for causing a computer to implement a method, comprising:

receiving an updated demand forecast and updating projected forecast data;

determining for a given time period:

projected inventory level using said projected forecast data, supplier commitment data, and prior periods' projected inventory levels; and

days of supply of inventory using said projected inventory level for a current time period and forecast data for subsequent periods; and

if said days of supply is out of a predetermined range for a given time period, taking corrective action.

1	18	. The storage medium of claim 17, wherein said given
2	time pe	riod is established by at least one of:
3	a	supplier; and
4	a	manufacturer.
1	19	. The storage medium of claim 17, wherein said
2	determi	ning for a given time period said projected

- determining for a given time period said projected
 inventory level includes providing a search criteria
 including a part number identifying said stock item.
 - 20. The storage medium of claim 19, wherein said search criteria includes a part name identifying said stock item.
 - 21. The storage medium of claim 19, wherein said search criteria includes a part description identifying said stock item.
 - 22. The storage medium of claim 17, wherein said number of convenient time periods includes a selected horizon.

23. The storage medium of claim 17, wherein said 1 number of convenient time periods is measured in increments 2 3 of time, said increments including one of: 4 days; 5 weeks; and months. 6 24. The storage medium of claim 17, wherein said 1 projected forecast data includes a quantity of said stock 2 item expected to be consumed during at least one of said 3 number of convenient time periods. 25. The storage medium of claim 17, wherein said supplier commitment data includes a quantity of said stock item a supplier commits to provide for a manufacturer. 1 26. The storage medium of claim 17, wherein said determining for a given time period said projected inventory level includes performing a calculation 4 comprising: 5 PI(n) = PI(n-1) - F(n-1) + C(n-1);wherein further: 6 7 PI represents a projected inventory value; 8 n represents a variable, said variable representing a

time period;

F represents a projected forecast value; and

C represents a supplier commitment value.

1

2 3.

1	27. The storage medium of claim 17, wherein said
2	predetermined range for said projected days of supply is
3	established by at least one of:
4	a manufacturer; and
5	a supplier.
1	28. The storage medium of claim 17, wherein said

- 1 28. The storage medium of claim 17, wherein said 2 predetermined range for said projected days of supply is a 3 single number.
 - 29. The storage medium of claim 17, wherein said days of supply is measured in time increments including one of:

days;
weeks; and
months.

- 30. The storage medium of claim 17, wherein said corrective action includes modifying said supplier commitment data.
- 1 31. The storage medium of claim 30, wherein said 2 modifying said supplier commitment data includes delaying a 3 shipment.
- 1 32. The storage medium of claim 30, wherein said 2 modifying said supplier commitment data includes increasing 3 said supplier commitment data.
